

Not actual patients.

IT'S IN OUR NATURE TO PERSIST AGAINST THE ODDS

Because no one should fight alone,
there's BRAFTOVI + MEKTOVI—
a combination therapy that may
help treat a certain type* of
BRAF+ metastatic melanoma

*BRAF V600E or V600K mutation.

WHAT IS BRAFTOVI + MEKTOVI?

BRAFTOVI and MEKTOVI are prescription medicines used together to treat people with a type of skin cancer called melanoma:

- that has spread to other parts of the body or cannot be removed by surgery, **and**
- that has a certain type of abnormal "BRAF" gene

BRAFTOVI should not be used to treat people with wild-type BRAF melanoma. Your healthcare provider will perform a test to make sure that BRAFTOVI + MEKTOVI is right for you.

It is not known if BRAFTOVI or MEKTOVI is safe and effective in children.

IMPORTANT SAFETY INFORMATION

BRAFTOVI + MEKTOVI may cause serious side effects, including: risk of new skin cancers; heart problems, including heart failure; blood clots; bleeding problems; eye problems; lung or breathing problems; liver problems; muscle problems (rhabdomyolysis); and changes in the electrical activity of your heart called QT prolongation.

Learn more about these and other serious side effects inside.

Please see additional Important Safety Information on pages 18 and 19. Please see both **BRAFTOVI Full Prescribing Information**, including **Medication Guide**, and **MEKTOVI Full Prescribing Information**, including **Patient Information**, at BRAFTOVIMEKTOVI.com.

 **BRAFTOVI**[®] +  **MEKTOVI**[®]
(encorafenib) 75 mg capsules (binimetinib) 15 mg tablets

4 Understanding metastatic melanoma

What is a biomarker?

A biomarker may be found by testing a sample of blood or tissue from the tumor. Biomarkers in cancer, also known as tumor markers, can tell your doctor more information about your specific type of cancer. They can also help your doctor understand what kind of abnormal gene your cancer may have, if any.

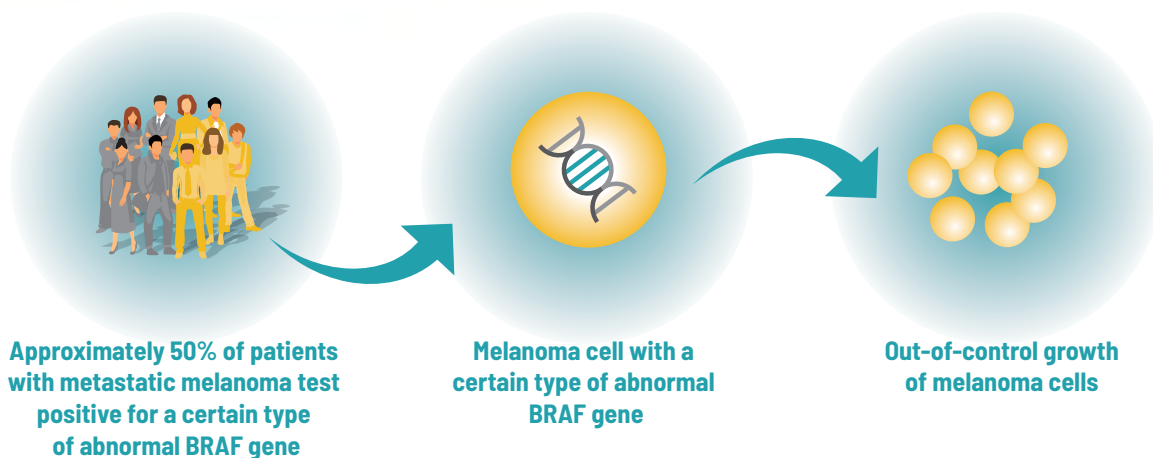

What does it mean to have a certain type* of BRAF+ metastatic melanoma?

When melanoma tests BRAF positive (BRAF+), it means the cancer has a certain type of abnormal BRAF gene. Metastatic means the cancer has spread to other parts of the body. Sometimes the cancer may be referred to as a certain type of BRAF+ unresectable melanoma, which means the cancer cannot be removed with surgery.

How common is this certain type of abnormal BRAF gene?

Approximately half of all people with metastatic melanoma test positive for a certain type of abnormal BRAF gene, which has led to targeted treatment options.

*BRAF V600E or V600K mutation.

IMPORTANT SAFETY INFORMATION (Continued)

What is the most important information I should know about BRAFTOVI and MEKTOVI?

BRAFTOVI and MEKTOVI may cause serious side effects, including:

- **Risk of new skin cancers.** BRAFTOVI, when used alone or with MEKTOVI, may cause skin cancers called cutaneous squamous cell carcinoma or basal cell carcinoma. Talk to your healthcare provider about your risk for these cancers. Check your skin and tell your healthcare provider right away about any skin changes, including a: new wart; skin sore or

reddish bump that bleeds or does not heal; change in size or color of a mole.

Your healthcare provider should check your skin before and every 2 months during treatment, and for up to 6 months after you stop treatment to look for any new skin cancers.

Your healthcare provider should also check for cancers that may not occur on the skin. Tell your healthcare provider about any new symptoms that develop during treatment.

Please see additional Important Safety Information on pages 18 and 19. Please see both BRAFTOVI Full Prescribing Information, including Medication Guide, and MEKTOVI Full Prescribing Information, including Patient Information, at BRAFTOVIMEKTOVI.com.

Understanding why BRAFTOVI + MEKTOVI may be right for you

5

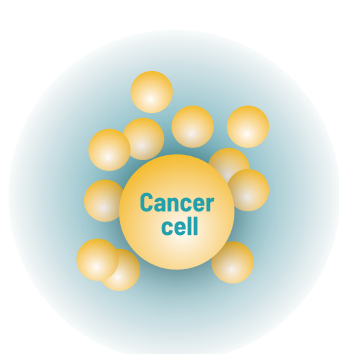

BRAFTOVI (*braf*-TOE-vee) + MEKTOVI (*mek*-TOE-vee) is a targeted oral combination therapy used to treat people with melanoma that has spread to other parts of the body (metastatic) or cannot be removed by surgery (unresectable) **and** has a certain type* of abnormal BRAF gene.

BRAFTOVI + MEKTOVI is not chemotherapy or immunotherapy. BRAFTOVI and MEKTOVI are two targeted therapies that, when taken together, can be used to treat this specific type of melanoma.

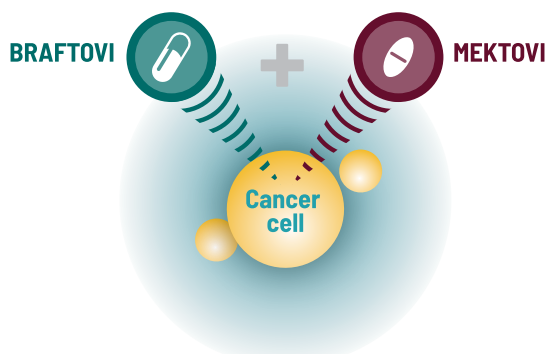

BRAFTOVI + MEKTOVI is a kinase (*KIGH-nase*) inhibitor combination. By targeting the signaling pathway at different points, BRAFTOVI + MEKTOVI helps to inhibit increased activity that causes melanoma cells to grow out of control.

The good news is that,

Patients who have a certain type of BRAF+ metastatic melanoma have BRAFTOVI + MEKTOVI—a targeted oral combination therapy.

Cancer cells multiply and the tumor may grow

Helps inhibit out-of-control cancer cell growth

*BRAF V600E or V600K mutation.

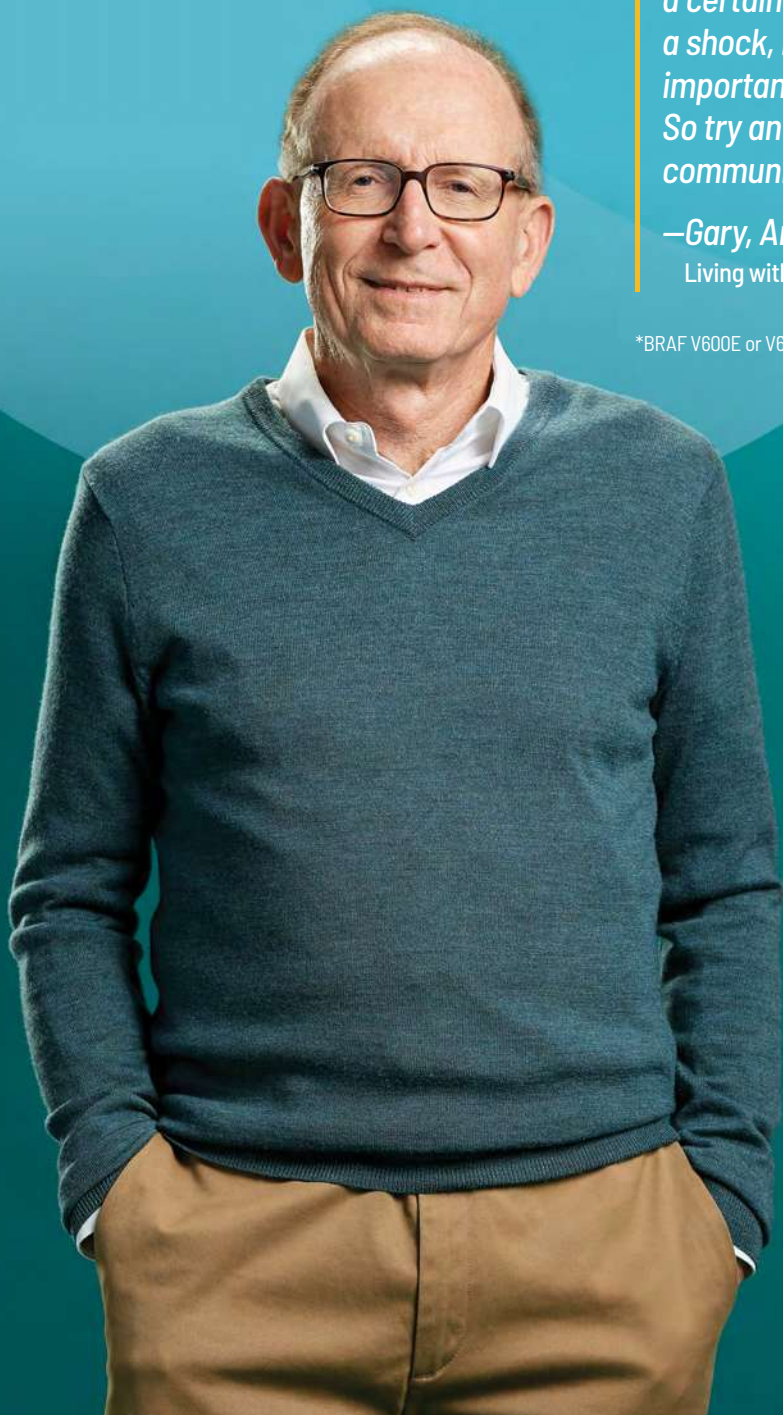

To learn more, visit Tovi2.com.

IMPORTANT SAFETY INFORMATION (Continued)

- **Heart problems, including heart failure.** Your healthcare provider should check your heart function before and during treatment with MEKTOVI. Call your healthcare provider right away if you have any of the following signs and symptoms of a heart problem: feeling like your heart is pounding or racing; shortness of breath; swelling of your ankles and feet; feeling light-headed.
- **Blood clots.** MEKTOVI can cause blood clots in your arms or legs, which can travel to your lungs and can lead to death. Get medical help right away if you have the following symptoms: chest pain; sudden shortness of breath or trouble breathing; pain in your legs with or without swelling; swelling in your arms and legs; a cool, pale arm or leg.

Please see additional Important Safety Information on pages 18 and 19. Please see both **BRAFTOVI Full Prescribing Information**, including **Medication Guide**, and **MEKTOVI Full Prescribing Information**, including **Patient Information**, at BRAFTOVIMEKTOVI.com.

 **BRAFTOVI**® +  **MEKTOVI**®
(encorafenib) 75 mg capsules (binimetinib) 15 mg tablets

I know what you're going through because I've been there myself. Let me tell you, being diagnosed with a certain type of BRAF+ metastatic melanoma was a shock, but I'm still here and continuing to fight. It's important for you to do all you can to help yourself. So try and stay positive and keep the lines of communication open with your healthcare team.*

—Gary, Ambassador

Living with a certain type of BRAF+ metastatic melanoma

*BRAF V600E or V600K mutation.

Please see Important Safety Information on pages 18 and 19. Please see both **BRAFTOVI Full Prescribing Information**, including **Medication Guide**, and **MEKTOVI Full Prescribing Information**, including **Patient Information**, at **[BRAFTOVIMEKTOVI.com](https://www.braftovimektovi.com)**.

Talking with your doctor before starting treatment

7

It's important to share information about yourself and your medical history with your healthcare provider and discuss possible limitations you may have when taking this treatment

Be sure to let your healthcare provider know if you:

- | | |
|--|--|
| <input type="checkbox"/> Have had bleeding problems | <input type="checkbox"/> Have lung or breathing problems |
| <input type="checkbox"/> Have eye problems | <input type="checkbox"/> Have any muscle problems |
| <input type="checkbox"/> Have heart problems, including a condition called long QT syndrome | <input type="checkbox"/> Have high blood pressure (hypertension) |
| <input type="checkbox"/> Have been told that you have low blood levels of potassium, calcium, or magnesium | <input type="checkbox"/> Are pregnant or plan to become pregnant. BRAFTOVI + MEKTOVI can harm your unborn baby |
| <input type="checkbox"/> Have liver or kidney problems | <input type="checkbox"/> Are breastfeeding or plan to breastfeed |
| <input type="checkbox"/> Have had blood clots | |

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Some medicines can affect how other medicines work and may cause side effects. Know the medicines you take. Keep a list of them to show your healthcare provider and pharmacist when you get a new medicine. Your healthcare provider can let you know if there are any medicines you should avoid at this time.

If you've been prescribed BRAFTOVI + MEKTOVI, you may have received a Patient Starter Kit, which includes a journal. You can use it to record any questions and concerns you may have about your health history and what other medications you currently take.

IMPORTANT SAFETY INFORMATION (Continued)

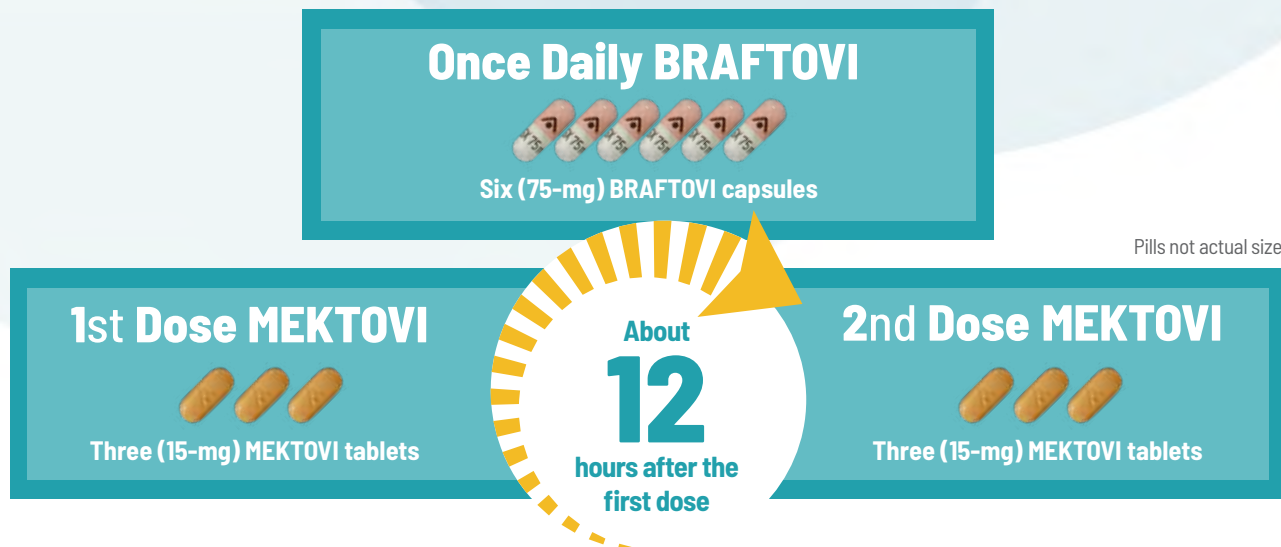

- **Bleeding problems.** BRAFTOVI, when taken with MEKTOVI, can cause serious bleeding problems, including in your stomach or brain, that can lead to death. Call your healthcare provider and get medical help right away if you have any signs of bleeding, including: headaches, dizziness, or feeling weak; cough up blood or blood clots; vomit blood or your vomit looks like "coffee grounds"; red or black stools that look like tar.

Please see additional Important Safety Information on pages 18 and 19. Please see both BRAFTOVI Full Prescribing Information, including Medication Guide, and MEKTOVI Full Prescribing Information, including Patient Information, at BRAFTOVIMEKTOVI.com.

8 How to take BRAFTOVI + MEKTOVI

Take BRAFTOVI at the same time each day with either the morning dose or evening dose of MEKTOVI:

Do not stop taking either medication without talking to your healthcare provider. If you develop side effects, your healthcare provider may change your dose or temporarily or completely stop treatment with either medication. Talk to your healthcare provider if you stop treatment with BRAFTOVI or MEKTOVI. Stopping one medication may affect your dosage of the other.

If you miss a dose of BRAFTOVI:

Take it as soon as you remember. But if it is within 12 hours of your next scheduled dose, just take your next dose at your regular time. Do not make up for the missed dose.

Do not take an extra dose if you vomit after taking your scheduled dose. Take your next dose at your regular time.

If you miss a dose of MEKTOVI:

Take it as soon as you remember. But if it is within 6 hours of your next scheduled dose, just take your next dose at your regular time. Do not make up for the missed dose.

Do not take an extra dose if you vomit after taking your scheduled dose. Take your next dose at your regular time.

IMPORTANT SAFETY INFORMATION (Continued)

- **Eye problems.** MEKTOVI can cause serious eye problems that might lead to blindness. Call your healthcare provider right away if you develop any of these symptoms of eye problems: blurred vision, loss of vision, or other vision changes; see colored dots; see halos (blurred outline around objects); eye pain, swelling, or redness.
- **Lung or breathing problems.** MEKTOVI can cause lung or breathing problems. Tell your healthcare provider if you have any new or worsening symptoms of lung or breathing problems, including: shortness of breath; cough.

Please see additional Important Safety Information on pages 18 and 19. Please see both **BRAFTOVI Full Prescribing Information**, including **Medication Guide**, and **MEKTOVI Full Prescribing Information**, including **Patient Information**, at BRAFTOVIMEKTOVI.com.

Make BRAFTOVI + MEKTOVI part of your daily routine

Taken at home or wherever you want

Taken with or without food

Stored at room temperature;
NO refrigeration required

Things to remember when taking BRAFTOVI + MEKTOVI

Take each dose of BRAFTOVI and MEKTOVI exactly as your healthcare provider tells you. Don't change your dose unless your healthcare provider tells you to.

Try to establish a routine of taking your morning and evening doses at about the same times each day. Make sure each dose of MEKTOVI is taken 12 hours apart.

Avoid grapefruit during treatment with BRAFTOVI. Grapefruit products may increase the amount of BRAFTOVI in your body.

Remember, this booklet is being provided for your information only and does not replace the medical advice of your healthcare provider.

Be sure to consult your healthcare provider regarding any questions or concerns you may have about your specific medical condition or treatment plan.

To learn more, visit Tovi2.com.

Please see Important Safety Information on pages 18 and 19. Please see both BRAFTOVI Full Prescribing Information, including Medication Guide, and MEKTOVI Full Prescribing Information, including Patient Information, at BRAFTOVIMEKTOVI.com.

 **BRAFTOVI**® +  **MEKTOVI**®
(encorafenib) 75 mg capsules (binimetinib) 15 mg tablets

10 How BRAFTOVI + MEKTOVI may help

How BRAFTOVI + MEKTOVI were studied

A clinical trial studied 577 patients who had melanoma that:

- Had a certain type of abnormal BRAF gene (V600E or V600K mutation) **and**
- Had spread to other parts of the body or could not be removed with surgery

To understand the benefit of BRAFTOVI + MEKTOVI, this clinical trial measured how long patients lived without their cancer getting worse.

BRAFTOVI + MEKTOVI helped people live 2x longer without their cancer worsening

In the trial, patients (192 total) receiving BRAFTOVI + MEKTOVI lived without their cancer worsening **for a median of 14.9 months vs 7.3 months** for patients (191 total) who were taking vemurafenib, another targeted treatment, alone. Median is defined as the middle number in a group of numbers arranged from the lowest to the highest.

These results were from a clinical trial and may not be the same as what you experience.

To learn more, visit Tovi2.com.

IMPORTANT SAFETY INFORMATION (Continued)

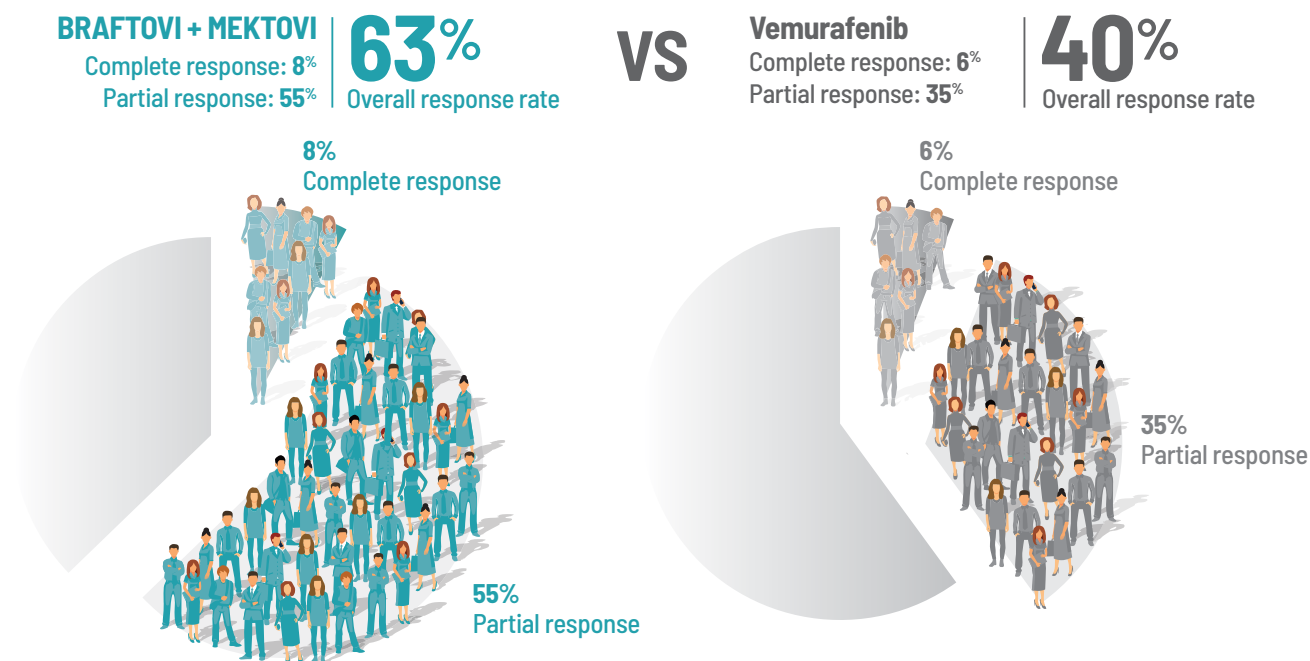

- **Liver problems.** Your healthcare provider should perform blood tests to check your liver function before and during treatment with MEKTOVI. Tell your healthcare provider if you have any of the following signs and symptoms of a liver problem: yellowing of your skin or the white part of your eyes (jaundice); dark or brown (tea-colored) urine; nausea or vomiting; loss of appetite.
- **Muscle problems (rhabdomyolysis).** MEKTOVI can cause muscle problems that can be severe. MEKTOVI may increase the level of an enzyme in your blood called creatine phosphokinase (CPK) and can be a sign of muscle damage. Your healthcare provider should perform a blood test to check your CPK levels before and during treatment. Tell your healthcare provider right away if you develop any of these symptoms: weakness; muscle aches or pain; dark, reddish urine.

Please see additional Important Safety Information on pages 18 and 19. Please see both **BRAFTOVI Full Prescribing Information**, including **Medication Guide**, and **MEKTOVI Full Prescribing Information**, including **Patient Information**, at BRAFTOVIMEKTOVI.com.

BRAFTOVI + MEKTOVI has been shown to be more effective at helping tumors shrink or even disappear

In the same clinical trial, the overall response rate showed that 63% of patients taking BRAFTOVI + MEKTOVI saw their tumors shrink or disappear compared with only 40% taking vemurafenib alone.

Complete response means that all signs of cancer are gone after treatment. It doesn't mean that the cancer is cured. Partial response means that the amount of cancer in the body, or the size of the tumor, has decreased after treatment. Overall response rate is the percentage of patients whose cancer shrinks or disappears after treatment.

These results were from a clinical trial and may not be the same as what you experience.

IMPORTANT SAFETY INFORMATION (Continued)

- **Changes in the electrical activity of your heart called QT prolongation.** QT prolongation can cause irregular heartbeats that can be life-threatening. Your healthcare provider should do tests before you start taking BRAFTOVI with MEKTOVI and during your treatment to check your

body salts (electrolytes). Tell your healthcare provider right away if you feel faint, light-headed, dizzy, or if you feel your heart beating irregularly or fast while taking BRAFTOVI with MEKTOVI. These symptoms may be related to QT prolongation.

Please see additional Important Safety Information on pages 18 and 19. Please see both [BRAFTOVI Full Prescribing Information](#), including [Medication Guide](#), and [MEKTOVI Full Prescribing Information](#), including [Patient Information](#), at [BRAFTOVIMEKTOVI.com](#).

*Persistence and determination
may change your perspective.*

Not actual patients.

Please see Important Safety Information on pages 18 and 19. Please see both [BRAFTOVI Full Prescribing Information](#), including [Medication Guide](#), and [MEKTOVI Full Prescribing Information](#), including [Patient Information](#), at [BRAFTOVIMEKTOVI.com](https://www.BRAFTOVIMEKTOVI.com).

Possible serious side effects of BRAFTOVI + MEKTOVI

Ask your healthcare provider about any information you do not understand or find unclear. **If you experience any of the symptoms below while taking BRAFTOVI + MEKTOVI, it's important to call your healthcare provider immediately.**

Risk of new skin cancers. New wart; skin sore or reddish bump that bleeds or does not heal; change in size or color of a mole

Heart problems, including heart failure. Feeling like your heart is pounding or racing; shortness of breath; swelling of your ankles and feet; feeling light-headed

Blood clots. Can lead to death. Symptoms include chest pain; sudden shortness of breath or trouble breathing; pain in your legs with or without swelling; swelling in your arms and legs; a cool, pale arm or leg

Bleeding problems. Can lead to death. Symptoms include headaches, dizziness, or feeling weak; coughing up blood or blood clots; vomiting blood or your vomit looks like "coffee grounds"; red or black stools that look like tar

Eye problems. Blurred vision, loss of vision, or other vision changes; see colored dots; see halos (blurred outline around objects); eye pain, swelling, or redness

Lung or breathing problems. Shortness of breath; cough

Liver problems. Yellowing of your skin or the white part of your eyes (jaundice); dark or brown (tea-colored) urine; nausea or vomiting; loss of appetite

Muscle problems (rhabdomyolysis). Weakness; muscle aches or pain; dark, reddish urine

Changes in the electrical activity of your heart (QT prolongation). Can be life-threatening. Symptoms include feeling faint, light-headed, dizzy, or if you feel your heart beating irregularly or fast

These are not all of the possible side effects of BRAFTOVI + MEKTOVI.

Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

You may also report side effects to Array BioPharma Inc. at 1-844-792-7729.

Please see Important Safety Information on pages 18 and 19. Please see both BRAFTOVI Full Prescribing Information, including Medication Guide, and MEKTOVI Full Prescribing Information, including Patient Information, at BRAFTOVIMEKTOVI.com.

14 Possible common side effects of BRAFTOVI + MEKTOVI

Side effects that occurred in $\geq 20\%$ of patients in a clinical trial:

	BRAFTOVI + MEKTOVI	Vemurafenib		BRAFTOVI + MEKTOVI	Vemurafenib
Fatigue	43%	46%	Diarrhea	36%	34%
Headache	22%	20%	Constipation	22%	6%
Abdominal pain	28%	16%	Muscle weakness, cramps, or stiffness	23%	22%
Nausea	41%	34%	Thickening skin	23%	49%
Vomiting	30%	16%	Dry skin	16%	26%
Joint pain	26%	46%	Itchiness	13%	21%
Fever and chills	18%	30%	Visual impairment	20%	4%
Rash	22%	53%	Hair loss	14%	38%

The most common side effects of BRAFTOVI when taken with MEKTOVI, include:

fatigue, nausea, diarrhea, vomiting, abdominal pain, and pain or swelling of your joints.

As with any medicine, it's possible you could experience side effects. It's important to:

Know what side effects (if any) you are experiencing with BRAFTOVI + MEKTOVI. Write them down as they occur. Make sure you share this information with your healthcare provider.

Tell your doctor if you experience any side effects, especially those that may be harmful or unpleasant. Your doctor may need to adjust your dose or discontinue treatment.

Please see Important Safety Information on pages 18 and 19. Please see both [BRAFTOVI Full Prescribing Information](#), including [Medication Guide](#), and [MEKTOVI Full Prescribing Information](#), including [Patient Information](#), at BRAFTOVIMEKTOVI.com.

Possible common side effects of BRAFTOVI + MEKTOVI

Patients in the same clinical trial experienced some of the following common side effects. Remember, the information below does not replace directions from your healthcare provider. Always talk to him or her about possible side effects and ways to manage them. Before taking any medications, speak with your healthcare provider.

Fatigue	Talk to your healthcare provider if you are experiencing fatigue. He or she may recommend ways to combat fatigue including a daily regimen of exercise or activities, as well as scheduled rest times. Your healthcare provider will have ideas on how to place these activities into your day to get the most out of them.
Headache	Your headache may be caused by a serious issue. Speak to your healthcare provider immediately for ways to relieve it.
Abdominal pain/Nausea	Recommendations to avoid the foods that commonly cause these issues can be suggested by your healthcare provider. Such foods may vary with different people and with what you are accustomed to eating, leading to adjustments in your daily diet. One suggestion is having smaller meals throughout the day.
Vomiting	It is important to stay hydrated throughout your treatment. Make sure you are drinking enough fluids and ask your healthcare provider about other kinds of liquids that may be right for you. To prevent dehydration, be sure to drink fruit juices, ginger ale, water, and/or sports drinks during the day.
Joint pain	Joint pain can be managed with self-care and recommendations from your healthcare team. Your healthcare provider may recommend physical therapy. A physical therapist can teach you simple exercises to help your joints work like they used to. Light stretching and hot or cold compresses (think heating pad or ice packs) may also help reduce joint pain. If needed, your healthcare provider may also recommend certain medications to reduce swelling and inflammation.
Fever and chills	As soon as you sense a fever coming on, or if you are experiencing chills or feeling uncommonly warm, check your temperature immediately and keep a record of it in your journal. Fever and chills should be promptly reported to your healthcare provider, who may recommend rest, fluids, and over-the-counter anti-fever medications.
Rash	Report any rashes you may experience immediately to your healthcare provider and describe the symptoms in detail. Your healthcare provider may recommend creams or lotions used to soothe your skin or wearing clothing of a different material, as well as avoiding exposure to the sun.
Diarrhea	A change in diet and over-the-counter medications may be recommended by your healthcare provider. But be sure to report diarrhea immediately in order to get treatment options that might be as practical as avoiding dairy products, or spicy and greasy foods. It is important to stay hydrated throughout your treatment. Sports drinks are often recommended as they contain replacement electrolytes and salts.

Please see Important Safety Information on pages 18 and 19. Please see both [BRAFTOVI Full Prescribing Information](#), including [Medication Guide](#), and [MEKTOVI Full Prescribing Information](#), including [Patient Information](#), at [BRAFTOVIMEKTOVI.com](#).

Please see Important Safety Information on pages 18 and 19. Please see both [BRAFTOVI Full Prescribing Information](#), including [Medication Guide](#), and [MEKTOVI Full Prescribing Information](#), including [Patient Information](#), at [BRAFTOVIMEKTOVI.com](https://www.BRAFTOVIMEKTOVI.com).

You may have questions about your treatment

When you meet with your healthcare provider, it's important that you discuss any concerns or questions you may have about your disease and your treatment for it. Below are some common ones that tend to come up. If you have additional questions, it's a good idea to write them down.

How is BRAFTOVI + MEKTOVI thought to work?

BRAFTOVI and MEKTOVI work together to help block signals that can cause melanoma cells with a certain type* of abnormal BRAF gene to grow out of control.

How long do I take BRAFTOVI + MEKTOVI?

It's important to take BRAFTOVI + MEKTOVI for as long as your healthcare provider tells you. Do not change your dose or stop your treatment unless your healthcare provider tells you to.

Do I need to take every dose of BRAFTOVI or MEKTOVI?

Take BRAFTOVI + MEKTOVI exactly as your healthcare provider tells you. Do not change your dose or stop your treatment unless your healthcare provider tells you to.

What if I miss a dose?

If you miss a dose of BRAFTOVI: Take it as soon as you remember. But if it is within 12 hours of your next scheduled dose, just take your next dose at your regular time. Do not make up for the missed dose. Do not take an extra dose if you vomit after taking your scheduled dose. Take your next dose at your regular time.

If you miss a dose of MEKTOVI: Take it as soon as you remember. But if it is within 6 hours of your next scheduled dose, just take your next dose at your regular time. Do not make up for the missed dose. Do not take an extra dose if you vomit after taking your scheduled dose. Take your next dose at your regular time.

For more information, please see the How to Take BRAFTOVI + MEKTOVI section of this brochure. If you have any questions or concerns, please bring them up with your healthcare provider.

What can I do about side effects?

Be sure to tell your healthcare provider if you have any side effects. Go to pages 13-14 for more information about side effects and page 15 for helpful tips.

Can I take BRAFTOVI + MEKTOVI with meals?

BRAFTOVI + MEKTOVI can be taken with or without food. Avoid grapefruit during treatment with BRAFTOVI. Grapefruit products may increase the amount of BRAFTOVI in your body.

Does BRAFTOVI + MEKTOVI have to be refrigerated?

BRAFTOVI + MEKTOVI can be stored at room temperature so there's no need to keep it in the fridge. Store at 68°F to 77°F.

*BRAF V600E or V600K mutation.

Please see Important Safety Information on pages 18 and 19. Please see both [BRAFTOVI Full Prescribing Information](#), including [Medication Guide](#), and [MEKTOVI Full Prescribing Information](#), including [Patient Information](#), at [BRAFTOVIMEKTOVI.com](#).

18 Indication and Important Safety Information

What is BRAFTOVI + MEKTOVI?

BRAFTOVI and MEKTOVI are prescription medicines used together to treat people with a type of skin cancer called melanoma:

- that has spread to other parts of the body or cannot be removed by surgery, **and**
- that has a certain type of abnormal “BRAF” gene

BRAFTOVI should not be used to treat people with wild-type BRAF melanoma. Your healthcare provider will perform a test to make sure that BRAFTOVI + MEKTOVI is right for you.

It is not known if BRAFTOVI or MEKTOVI is safe and effective in children.

IMPORTANT SAFETY INFORMATION

What is the most important information I should know about BRAFTOVI and MEKTOVI?

BRAFTOVI and MEKTOVI may cause serious side effects, including:

- **Risk of new skin cancers.** BRAFTOVI, when used alone or with MEKTOVI, may cause skin cancers called cutaneous squamous cell carcinoma or basal cell carcinoma. Talk to your healthcare provider about your risk for these cancers.

Check your skin and tell your healthcare provider right away about any skin changes, including a:

- o new wart
- o skin sore or reddish bump that bleeds or does not heal
- o change in size or color of a mole

Your healthcare provider should check your skin before and every 2 months during treatment, and for up to 6 months after you stop treatment to look for any new skin cancers.

Your healthcare provider should also check for cancers that may not occur on the skin. Tell your healthcare provider about any new symptoms that develop during treatment.

- **Heart problems, including heart failure.** Your healthcare provider should check your heart function before and during treatment with MEKTOVI. Call your healthcare provider right away if you have any of the following signs and symptoms of

a heart problem:

- o feeling like your heart is pounding or racing
- o shortness of breath
- o swelling of your ankles and feet
- o feeling light-headed

- **Blood clots.** MEKTOVI can cause blood clots in your arms or legs, which can travel to your lungs and can lead to death. Get medical help right away if you have the following symptoms:

- o chest pain
- o sudden shortness of breath or trouble breathing
- o pain in your legs with or without swelling
- o swelling in your arms and legs
- o a cool, pale arm or leg

- **Bleeding problems.** BRAFTOVI, when taken with MEKTOVI, can cause serious bleeding problems, including in your stomach or brain, that can lead to death. Call your healthcare provider and get medical help right away if you have any signs of bleeding, including:

- o headaches, dizziness, or feeling weak
- o cough up blood or blood clots
- o vomit blood or your vomit looks like “coffee grounds”
- o red or black stools that look like tar

- **Eye problems.** MEKTOVI can cause serious eye problems that might lead to blindness. Call your healthcare provider right away if you develop any of these symptoms of eye problems:

- o blurred vision, loss of vision, or other vision changes
- o see colored dots
- o see halos (blurred outline around objects)
- o eye pain, swelling, or redness

- **Lung or breathing problems.** MEKTOVI can cause lung or breathing problems. Tell your healthcare provider if you have any new or worsening symptoms of lung or breathing problems, including:

- o shortness of breath
- o cough

- **Liver problems.** Your healthcare provider should perform blood tests to check your liver function before and during treatment with MEKTOVI. Tell your healthcare provider if you have any of the following signs and symptoms of a liver problem:

Please see both **BRAFTOVI Full Prescribing Information, including Medication Guide**, and **MEKTOVI Full Prescribing Information, including Patient Information**, at BRAFTOVIMEKTOVI.com.

IMPORTANT SAFETY INFORMATION (Continued)

- o yellowing of your skin or the white part of your eyes (jaundice)
- o dark or brown (tea-colored) urine
- o nausea or vomiting
- o loss of appetite
- **Muscle problems (rhabdomyolysis).** MEKTOVI can cause muscle problems that can be severe. MEKTOVI may increase the level of an enzyme in your blood called creatine phosphokinase (CPK) and can be a sign of muscle damage. Your healthcare provider should perform a blood test to check your CPK levels before and during treatment. Tell your healthcare provider right away if you develop any of these symptoms:
 - o weakness
 - o muscle aches or pain
 - o dark, reddish urine
- **Changes in the electrical activity of your heart called QT prolongation.** QT prolongation can cause irregular heartbeats that can be life-threatening. Your healthcare provider should do tests before you start taking BRAFTOVI with MEKTOVI and during your treatment to check your body salts (electrolytes). Tell your healthcare provider right away if you feel faint, light-headed, dizzy, or if you feel your heart beating irregularly or fast while taking BRAFTOVI with MEKTOVI. These symptoms may be related to QT prolongation.

Tell your healthcare team if you are pregnant or plan to become pregnant. BRAFTOVI and MEKTOVI can harm your unborn baby. Females who are able to become pregnant should use effective non-hormonal birth control (contraception) during and for at least:

- o 2 weeks after the last dose of BRAFTOVI
- o 30 days after the last dose of MEKTOVI
- o Birth control methods that contain hormones (such as birth control pills, injections, or transdermal systems) may not work as well during treatment with BRAFTOVI.
- o Your healthcare team will do a pregnancy test before you start taking BRAFTOVI and MEKTOVI. Tell your healthcare provider right away if you

become pregnant or think you might become pregnant during treatment.

Talk to your healthcare team if you are breastfeeding or plan to breastfeed. It is not known if either treatment passes into your breast milk. Do not breastfeed during treatment with BRAFTOVI and MEKTOVI and for:

- o 2 weeks after the final dose of BRAFTOVI
- o 3 days after the final dose of MEKTOVI

BRAFTOVI may cause fertility problems in males. Talk to your healthcare provider if this is a concern for you.

The most common side effects of BRAFTOVI when taken with MEKTOVI, include: fatigue, nausea, diarrhea, vomiting, abdominal pain, and pain or swelling of your joints.

Before taking BRAFTOVI + MEKTOVI, tell your healthcare provider about all of your medical conditions, including if you:

- have had bleeding problems
- have eye problems
- have heart problems, including a condition called long QT syndrome
- have been told that you have low blood levels of potassium, calcium, or magnesium
- have liver or kidney problems
- have had blood clots
- have lung or breathing problems
- have any muscle problems
- have high blood pressure (hypertension)
- are pregnant or plan to become pregnant
- are breastfeeding or plan to breastfeed

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. BRAFTOVI and certain other medicines can affect each other, causing side effects or affecting how BRAFTOVI or other medicines work. You should also avoid grapefruit products during treatment with BRAFTOVI.

These are not all the possible side effects of BRAFTOVI and MEKTOVI. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088. You may also report side effects to Array BioPharma Inc. at 1-844-792-7729.

I always say that you don't have to have cancer to fight cancer. The support of friends and family are important and can really make a difference. Knowing that they're not alone in their journey can mean the world to people who are fighting a certain type of BRAF+ metastatic melanoma. As for me, I'm there for Gary every step of the way.*

—Anne, Caregiver to Gary

*BRAF V600E or V600K mutation.

Please see Important Safety Information on pages 18 and 19. Please see both [BRAFTOVI Full Prescribing Information](#), including [Medication Guide](#), and [MEKTOVI Full Prescribing Information](#), including [Patient Information](#), at [BRAFTOVIMEKTOVI.com](https://www.BRAFTOVIMEKTOVI.com).

When you are a caregiver, you do more than just care

You can make a difference in how your partner, family member, or friend deals with cancer. Giving emotional and practical support to the person you care for may take many forms. It helps to:

Be informed. Read this brochure with your loved one. Make sure you both read it in its entirety to best understand the journey ahead and what to expect from this treatment. **For more information, please see the [BRAFTOVI Medication Guide](#) and the [MEKTOVI Patient Information](#) or visit [Tovi2.com](#).**

Understand your role. This brochure offers information about BRAFTOVI + MEKTOVI, what your loved one who's taking it can expect during treatment, as well as other helpful resources. Keep in mind, your support is also a part of their treatment. There are many ways to be there for someone. Find out what works best for you and do not be afraid to ask for help from others.

Know you don't have to have cancer to fight cancer. Talk to the person you care for. Let them know how you are going to help. Remember that open communication is important. You can find more information at [Tovi2.com](#).

Go to page 23 to learn more about the Tovi2 patient and caregiver text message support programs. The makers of BRAFTOVI + MEKTOVI are committed to supporting not only patients but also caregivers in their battle against a certain type* of BRAF+ metastatic melanoma.

As a caregiver, looking after your own well-being isn't selfish, it's necessary

Your role as a caregiver can be a valuable experience. It can also be physically and emotionally draining. Caregivers are often so busy focusing on their partner, family member, or friend that they put their own needs and feelings aside.

You may want to consider the following helpful tips to keep yourself from feeling overwhelmed:

*BRAF V600E or V600K mutation.
